## What is claimed is:

- A composite polymer electrolyte for a lithium secondary battery, which comprises:
- a composite film structure comprising a first porous polymer film with micro-scale morphology and a second porous polymer film with submicro-scale morphology coated on a surface of the first porous polymer film; and

an electrolyte solution impregnated into the composite film structure.

- 2. The composite polymer electrolyte of claim 1, wherein the first porous polymer film is made of polyethylene, polypropylene, polyimide, polysulfone, polyurethane, polyvinylchloride, cellulose, nylon, polyacrylonitrile, polyvinylidene fluoride, polytetrafluoroethylene, a copolymer or blend thereof.
- 3. The composite polymer electrolyte of claim 1, wherein the second porous polymer film is made of a vinylidene fluoride based polymer, an acrylate based polymer, a copolymer or blend thereof.
- 4. The composite polymer electrolyte of claim 3, wherein the second porous polymer film is made of a copolymer of vinylidene fluoride and hexafluoropropylene, a copolymer of vinylidene fluoride and trifluoroethylene, a copolymer of vinylidene fluoride and tetrafluoroethylene, polymethylacrylate, polyethylacrylate, polyethylacrylate, polyethylmethacrylate, polybutylacrylate, polybutylacrylate, polybutylacrylate, polybutylacrylate, polyethylene oxide, polypropylene oxide, a copolymer or blend thereof.

- 5. The composite polymer electrolyte of claim 1, wherein the first porous polymer film has a thickness of 10 to 25  $\mu$ m and the second porous polymer film has a thickness of 0.5 to 10  $\mu$ m.
- 30
- 6. The composite polymer electrolyte of claim 1, wherein the second porous polymer film comprises an inorganic material.

- 7. The composite polymer electrolyte of claim 6, wherein the inorganic material is selected from the group consisting of silica, talc, alumina ( $Al_2O_3$ ), y-LiAlO<sub>2</sub>, TiO<sub>2</sub>, and zeolite.
- 5 8. The composite polymer electrolyte of claim 6, wherein the inorganic material is added in an amount of 1 to 100% by weight, based on the total weight of the polymer of the second porous polymer film.
- 9. The composite polymer electrolyte of claim 1, wherein the electrolyte solution is made of ethylene carbonate, propylene carbonate, dimethyl carbonate, diethyl carbonate, methylethyl carbonate, tetrahydrofuran, 2-methyltetrahydrofuran, dimethoxyethane, methyl formate, ethyl formate, gamma-butyrolactone, or a mixture thereof.
- 10. The composite polymer electrolyte of claim 1, wherein the electrolyte solution is impregnated in the composite film structure in an amount of 1 to 1,000% by weight, based on the total weight of the polymer of the composite film structure.
- 11. The composite polymer electrolyte of claim 1, wherein the electrolyte solution comprises at least one lithium salt selected from the group consisting of lithium perchlorate (LiClO<sub>4</sub>), lithium triflate (LiCF<sub>3</sub>SO<sub>3</sub>), lithium hexafluorophosphate (LiPF<sub>6</sub>), lithium tetrafluoroborate (LiBF<sub>4</sub>), and lithium trifluoromethanesulfonylimide (LiN(CF<sub>3</sub>SO<sub>2</sub>)<sub>2</sub>).
- 12. The composite polymer electrolyte of claim 11, wherein the lithium salt is dissolved in the electrolyte solution in an amount of 1 to 200% by weight, based on the total weight of the polymer of the composite film structure.
  - 13. A method of manufacturing a composite polymer electrolyte for a lithium secondary battery, the method comprising:

preparing a first porous polymer film with micro-scale morphology;

30

uniformly dissolving a microporous polymer with submicro-scale morphology and an inorganic material in a co-solvent in a predetermined ratio to produce a solution;

forming a second porous polymer film by coating the first porous polymer film with the solution to produce a composite film structure which comprises the first porous polymer film and the second porous polymer film that are different in morphologies; and

impregnating the composite film structure with an electrolyte solution.
